

FIG. 1

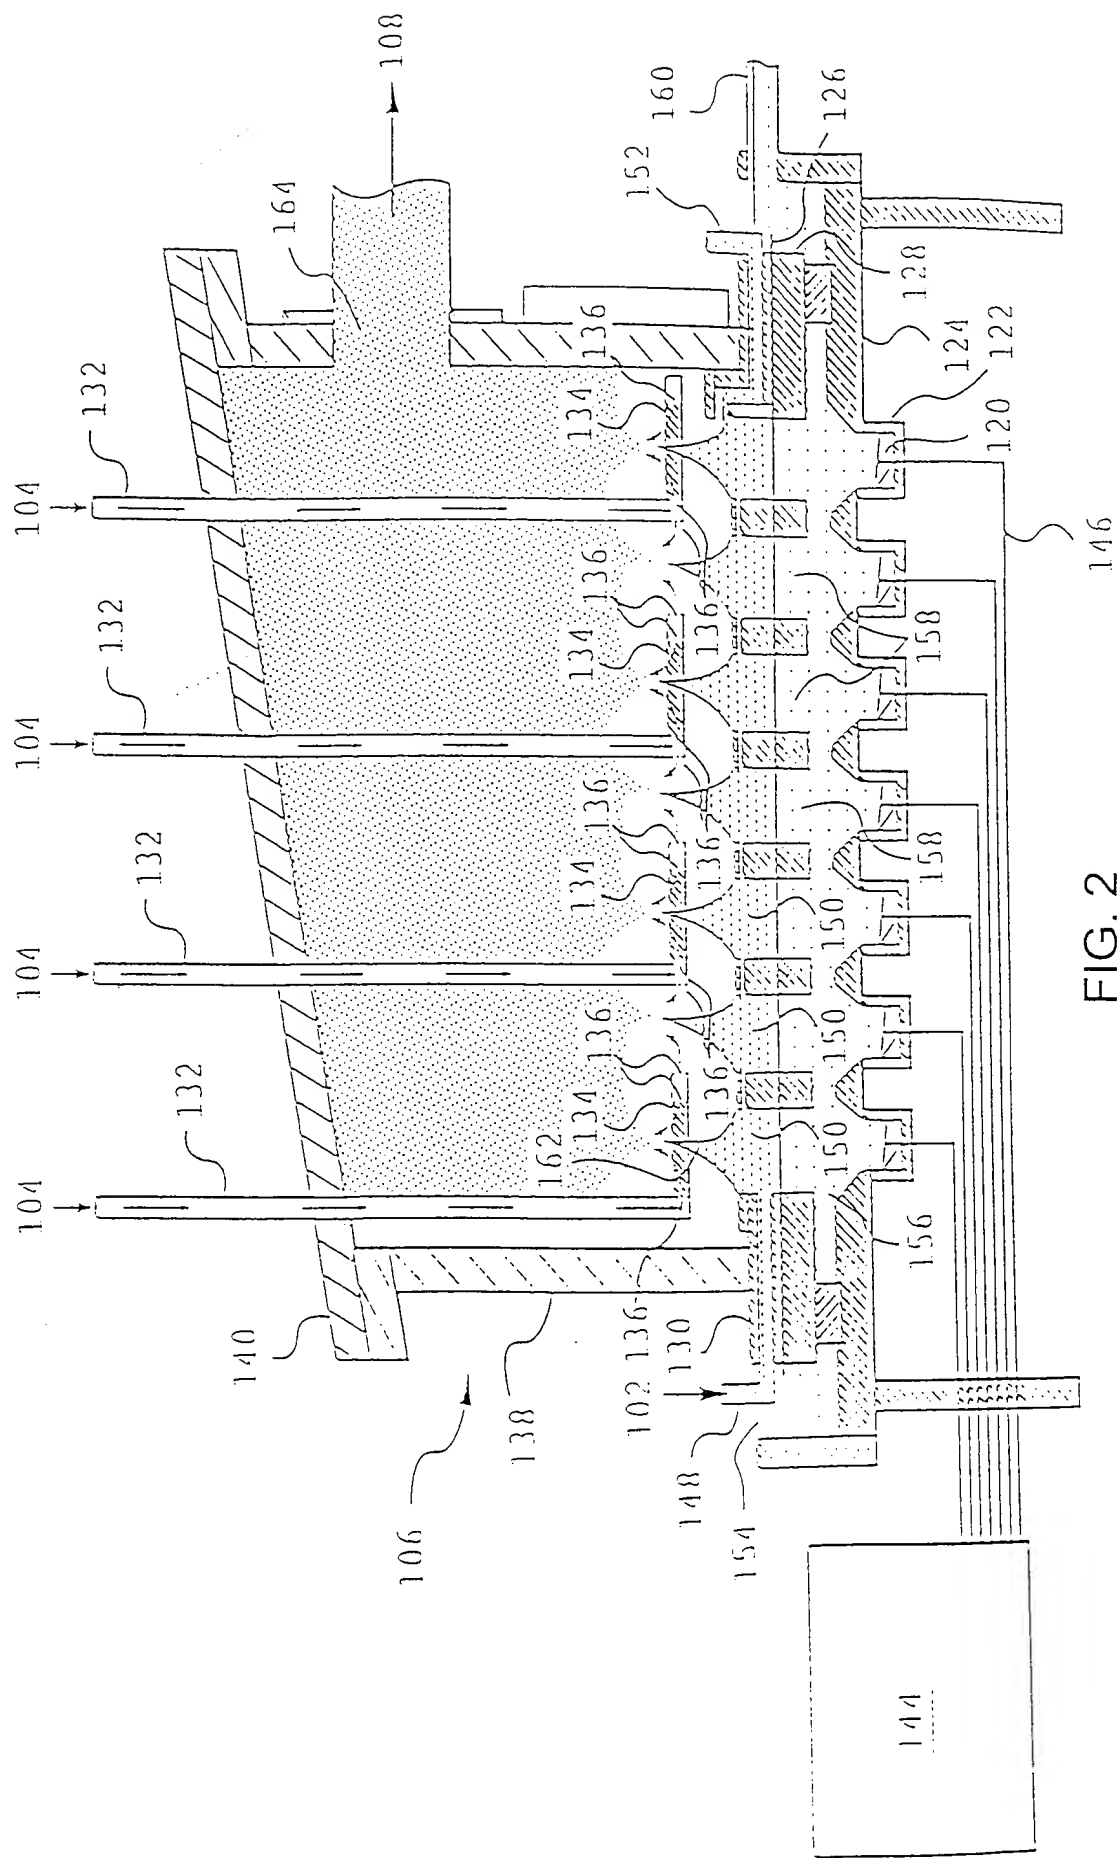

FIG. 2

Figure 1 is a scatter plot showing the relationship between the number of genes in a cluster (X-axis) and the number of genes in the same cluster in the same tissue (Y-axis). The X-axis ranges from 0 to 100, and the Y-axis ranges from 0 to 100. A diagonal line represents the identity line (y=x). Data points are labeled with gene names: p21, p53, p27, p29, p30, p31, p32, p33, p34, p35. The plot shows a positive correlation, with most points falling on or near the identity line.

Figure 1 is a scatter plot showing the relationship between the number of genes in a cluster (X-axis) and the number of genes in the same cluster in the same tissue (Y-axis). The X-axis ranges from 0 to 100, and the Y-axis ranges from 0 to 100. A diagonal line represents the identity line (y=x). Data points are labeled with gene names: p21, p53, p27, p29, p30, p31, p32, p33, p34, and p35. The points generally follow the diagonal line, indicating a positive correlation between the number of genes in a cluster and the number of genes in the same cluster in the same tissue.

FIG. 1 is a perspective view of a multi-compartment storage device. The device includes a main body with multiple horizontal compartments (130) and a top section with two vertical compartments (148, 152). A handle (198) is visible on the top section. The entire unit is enclosed in a frame (190).

Figure 1 is a scatter plot showing the relationship between the number of days from symptom onset to the first medical consultation (X-axis) and the number of days from symptom onset to the first medical consultation (Y-axis). The data points show a positive correlation, with a dashed line representing the linear regression. The X-axis ranges from 0 to 10, and the Y-axis ranges from 0 to 10. The data points are approximately: (1, 1), (2, 2), (3, 3), (4, 4), (5, 5), (6, 6), (7, 7), (8, 8), (9, 9), (10, 10).
